

How to Run a Successful Simulation Center

Course Description

Participants of this two day program will learn best practices associated with the operations of a simulation center. Key operational, administrative, and technological elements of a successful simulation center will be reviewed. Topics such as staff considerations, daily operations, course development, and simulator programming will be discussed. Interactive exercises will allow participants to practice what they learned during course sessions.

Course Topics

- Budgets and effective billing models
- Staffing considerations and job descriptions
- Organizational charts and approval processes
- Technology considerations and management
- Daily operations of the simulation center
- Course development
- Schedule considerations
- Simulator programming forms
- Repair and maintenance of equipment

Target Audience

- Center directors
- Center leadership
- Operational directors
- Operational personnel
- Anyone involved in the day-to-day operation or management of a simulation center
